Back End Developer

Description
We were looking for a dynamic coder and problem-solver to work with our team and help build web products that solve complex global problems for our clients. Preferably a Full Stack Developer with 2-3 years of experience in building & maintaining web applications, not afraid of taking on new challenges in a fast paced startup environment, able to take leadership decisions independently and an obsession for effective & timely communication.

Responsibilities
Should be proficient in at least one object oriented programming language: C++ / Java / Laravel.

Qualifications

- Should be proficient in at least one object oriented programming language: C++ / Java / Laravel.
- Preferred stack: MERN (MongoDB, ExpressJS, React, NodeJS).
- Alternate stack: LAMP with Laravel framework.
- Should be familiar with building Progressive Web Applications using custom service workers for offline functionality.
- Experience with offline storage, threading, and performance tuning.
- Proficient in frontend development using HTML5, CSS3, JavaScript, JQuery, JSON.
- Knowledge of and experience in server-side scripting and process automation.
- Knowledge of and experience in MySQL database operations & optimization.
- Knowledge of and experience in building & handling REST APIs.
- Should have experience with UI/UX design.
- Should be comfortable working with DevOps processes using Agile methodology.
